

Carbon Reduction Plan

Supplier name: Viatris UK Healthcare Ltd ("Viatris UK")

Publication date: 20th November 2023

Commitment to achieving Net Zero

Viatris Inc. ("Viatris") is committed to minimising our impact on the environment while safeguarding a reliable supply of medicine. Climate change mitigation and adaptation are part of protecting the resiliency of our supply chain, the health and well-being of patients we serve and the communities on which we depend. For us, that includes systematic work to reduce carbon emissions, increasing the use of renewable energy, enhancing efficiency in our own operations, and working with partners to encourage their efforts. We are also working to protect our employees and operations from the impact of climate change through effective planning, risk mitigation and building resilience against the impact of extreme weather.

To this end, we have set science-based greenhouse gas (GHG) reduction targets in support of the Paris Climate agreement with the ambition to limit global warming to 1.5°C. These targets have been validated and approved by the Science Based Targets initiative (SBTi), in November 2022.

Science-based targets provide a clearly defined pathway for companies to reduce GHG emissions, helping prevent the worst impacts of climate change while also helping to preserve future business growth opportunities. Targets are considered 'science-based' if they are in line with what the latest climate science deems necessary to meet the goals of the Paris Agreement – limiting global warming to well-below 2°C above pre-industrial levels and pursuing efforts to limit warming to 1.5°C.

The SBTi classified Viatris' scope 1 and 2 target ambition and has determined that it is in line with a 1.5°C trajectory, a worldwide goal of limiting global warming. The SBTi recommend that companies should prioritize rapid, deep emission reductions by setting near-term targets: Rapid, deep cuts to direct and indirect value-chain emissions are the most effective, scientifically-sound way of limiting global temperature rise to 1.5°C.

Viatris' climate targets

 Targets: Reduce absolute Scope 1 and 2 GHG emissions 42% by 2030¹ and reduce Scope 3 GHG emissions covering purchase goods and services, capital goods, fuel and energy related alternatives and upstream transportation and distribution 25% by 2030.^{1*}

Viatris reports annually environmental and climate -related commitments, work and performance. Viatris' response to the CDP questionnaire is available on the CDP <u>public</u> response page.

As we make progress on our climate targets, we will continue to assess the appropriate and science-based pathway for a net-zero commitment.

Requested item: Baseline Year: 2020

Requested item	Viatris input – UK
Baseline year emissions: EMISSIONS TOTAL (tCO2e)	2020
Scope 1	0
Scope 2	437.95
Scope 3 (Included Sources)	Not Applicable
Total Emissions	437.95

Requested item: Current Emissions Reporting

Requested item	Viatris input – UK
EMISSIONS TOTAL (tCO2e)	2022
Scope 1	0
Scope 2	395.63
Scope 3 (Included Sources)	Not Applicable
Total Emissions	395.63

Regarding scope 1 emissions: Viatris UK sites in scope of this CRP does not have any scope 1 emissions, hence 0 is accurate.

Regarding scope 3 emissions: Viatris' companywide target to reduce scope 3 emissions by 25% by 2030 includes UK suppliers. That target covers: Purchased goods and services, capital goods, fuel- and energy-related activities and upstream transportation and distribution. We currently don't have our supplier data broken down or tracked as per the categories of the NHS. As a reference, please note that Viatris' emissions per 2022 per the four categories of our scope 3 reduction target, including appliable UK suppliers was,1,958,731. metric tons, as reported to the CDP Climate program in 2023.

¹ 2020 as baseline. The target boundary includes land-related emissions and removals from bioenergy feedstock

Emissions reduction targets

Targets: Reduce absolute Scope 1 and 2 greenhouse gas (GHG) emissions 42% by 20301and reduce Scope 3 GHG emissions covering purchase goods and services, capital goods, fuel and energy related alternatives and upstream transportation and distribution 25% by 2030.1* These near-term targets have been validated and approved by the Science Based Targets initiative (SBTi); this approved scope 1&2 target is in line with a 1.5°C trajectory.

Carbon Reduction Projects and Completed Carbon Reduction Initiatives

Viatris UK's operations are included in Viatris Inc.'s groupwide environmental health and safety management system and program, subject to companywide Environmental Stewardship and Climate Policies (to name just a few) and included in the companywide environmental goals and targets. In 2022 Viatris issued companywide GHG reductions targets, approved and validated by the SBTi, covering also the applicable parts of the Viatris UK operations.

• Targets: Reduce absolute Scope 1 and 2 greenhouse gas (GHG) emissions 42% by 2030¹ and reduce Scope 3 GHG emissions covering purchase goods and services, capital goods, fuel and energy related alternatives and upstream transportation and distribution 25% by 2030.^{1*} These near-term targets have been validated and approved by the Science Based Targets initiative (SBTi).

Key actions to progress on our SBTi targets include:

- Increasing renewable energy usage.
- Implementing energy efficiency projects.
- Transitioning to refrigerants with lower Global Warming Potential and preventing refrigerant leaks.
- · Using alternative fuels and technologies.
- Utilizing existing programs, strategies and commitments to achieve our target.

¹ 2020 as baseline

^{*}The target boundary includes land-related emissions and removals from bioenergy feedstock

Further measures we hope to implement in the future

Key actions to progress on our SBTi targets will continue to include:

- Increasing renewable energy usage.
- Implementing energy efficiency projects.
- Transitioning to greener lesser GWP refrigerants and preventing refrigerant leaks.
- · Using alternative fuels and technologies.
- Utilizing existing programs, strategies and commitments to achieve our target.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.²

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.³

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Yours Sincerely,

Matthew Salzmann

Viatris UK Country Manager
