

## Environmental Stewardship Policy

### POLICY STATEMENT

We are committed to protecting the health of our environment and work to advance responsible and sustainable operations. As a global healthcare company, we recognize that environmental health is interconnected with human health

### INTRODUCTION

- We acknowledge that our manufacturing processes and the people living in the communities in which we operate require access to clean, unpolluted natural resources. One of the ways we can accomplish our mission of empowering people to live healthier at every stage of life is by deploying technologies, processes, and systems to minimize our environmental impact, while working to ensure stable access to high-quality medicines.
- Working to ensure stable access to high-quality medicines depends upon continuously working to further advance responsible and sustainable operations. We do this across our global network by implementing technologies, processes and systems to minimize the impact on climate change, energy use, water withdrawal, and air emissions.
- We recognize that human activity, including our manufacturing operations, may have potential to contribute to the adverse effects on the health of the environment and communities we serve. Therefore, we strive to continually improve our manufacturing practices to be more sustainable and have minimal environmental impact. Viatris is committed to doing its part to protect the environment through enhanced technologies in our operations, initiatives and partnerships and multi-stakeholder engagement. This Environmental Stewardship policy, as well as our policies on Climate Change and Water, provide an overview of the ways we prioritize environmental protection throughout all of our operations.

Not only do we commit to protecting and conserving our natural resources by reducing our air emissions, reducing our waste, managing our wastewater to prevent it from reaching the environment, and continually improving our recycling capabilities, but we also partner with our suppliers to ensure they strive to do the same. Furthermore, we support initiatives within the communities where we operate.

- Viatris' global Environment Health and Safety ("EHS") management model serves to support compliance with both local regulations and global company policies and requirements, along with fostering a culture of ongoing improvement. Everything we do is guided by Viatris' 13 EHS Principles, which apply to all Viatris global operations and every level of the organization.
- Viatris is committed to providing transparent information and we report regularly on our progress. We measure and report on our environmental impact at least annually; information is presented on our website, in company reports, as well as the CDP water and climate programs. We ensure the accuracy of the data and information through third-party data assurance.

## COMMITMENTS

### Comply with All Applicable Environmental Regulations

- We maintain compliance with all applicable environmental regulations in countries in which Viatris operates. Where laws and regulations do not provide adequate controls, our own technical requirements aim to help protect the environment. In addition to being compliant with Viatris global EHS management system, policies and principles, many of our production facilities are certified to ISO 14001 (environmental management) and ISO 50001 (energy management), and we are committed to expanding ISO certification to other locations.

### Continually Reduce Our Impact on Environmental Health

- We strive to continually reduce our impact on the environment and advance sustainable practices across our operations. Our environmental assessments help us identify and promote more sustainable processes and products. Environmental considerations are always incorporated into our decision-making process. We strive to use natural resources responsibly and to minimize the environmental impact of our activities. We continually strive to make our operations more sustainable and cleaner by incorporating new technology and improving our processes and the materials that we use.

### Collaborate with Supply and Value Chain Partners

- As members of the Pharmaceutical Supply Chain Initiative (PSCI) and the AMR Industry Alliance, we work in partnership with our sector, suppliers, and other stakeholders to promote environmental stewardship across our value chain, increase understanding of environmental issues, and disseminate good practices with other companies.

### Promote a Culture of Environmental Stewardship

- We cultivate a culture where employees actively strive to reduce their impacts and Viatris' on the environments in which we work and live. We promote the responsible use of natural resources, including but not limited to recycling, water stewardship, and efforts to reduce waste and emissions from our operations.

### Monitor and Improve Performance

- We set targets, measure our progress, and report on how well we achieve our targets so that we may identify new ways to continuously improve our environmental protection methods throughout our operations network. We implement practices consistent with the principles, programs, and technical requirements in our EHS management system and routinely and systematically evaluate our environmental performance to maintain the systems and practices needed to conform to the expectations of this Governance Document. This includes periodic audits to evaluate our environmental performance.
